TENEMENT UPDATE AND DRILLING PROGRAM

TENEMENT STATUS –PL110/94, PL111/94 AND PL54/98

Botswana Metals is pleased to announce that Prospecting Licenses PL110/94, PL111/94 and PL54/98 (Figure 1) have been extended for 2 years expiring on the 30 September, 2010. These licenses are highly prospective for Ni-Cu mineralization as well as gold and other base metals.

DRILL PROGRAM COMMENCES

A drill program of approximately 3000m will commence on September the 6th at Mmamanaka and Maibele North to test for sulfide nickel copper mineralisation. Details as follows”:

MMAMANAKA PL111/94

A drill program of 10 Reverse Circulation holes for a total of 2100m is due to commence at Mmamanaka on 6 September. The drill targets are massive to disseminated nickel, copper, Platinum Group Elements (PGE), where very strong Electro Magnetic (EM) conductive anomalies associated with elevated Ni-Cu soil geochemistry and ultramafic rock types occur over an 8 km strike length.

MAIBELE NORTH PROSPECT IN PL110/94

Previous drilling at the Maibele North prospect by Falconbridge and BML has previously identified a significant accumulation of massive nickel, copper and PGE sulfide mineralisation that is open along strike and down plunge. A drill program of 1000m of Reverse Circulation drilling is scheduled to test the eastern, down-plunge extent of the Maibele North mineralisation.

GROUND GEOPHYSICS

A work program comprising ground EM and ground magnetic surveying, soil sampling and geological mapping is also underway in the Magogophate Shear Zone designed to progress several other greenfield’s targets.

BOTSWANA Metals Limited

ABN 96 122 995 073

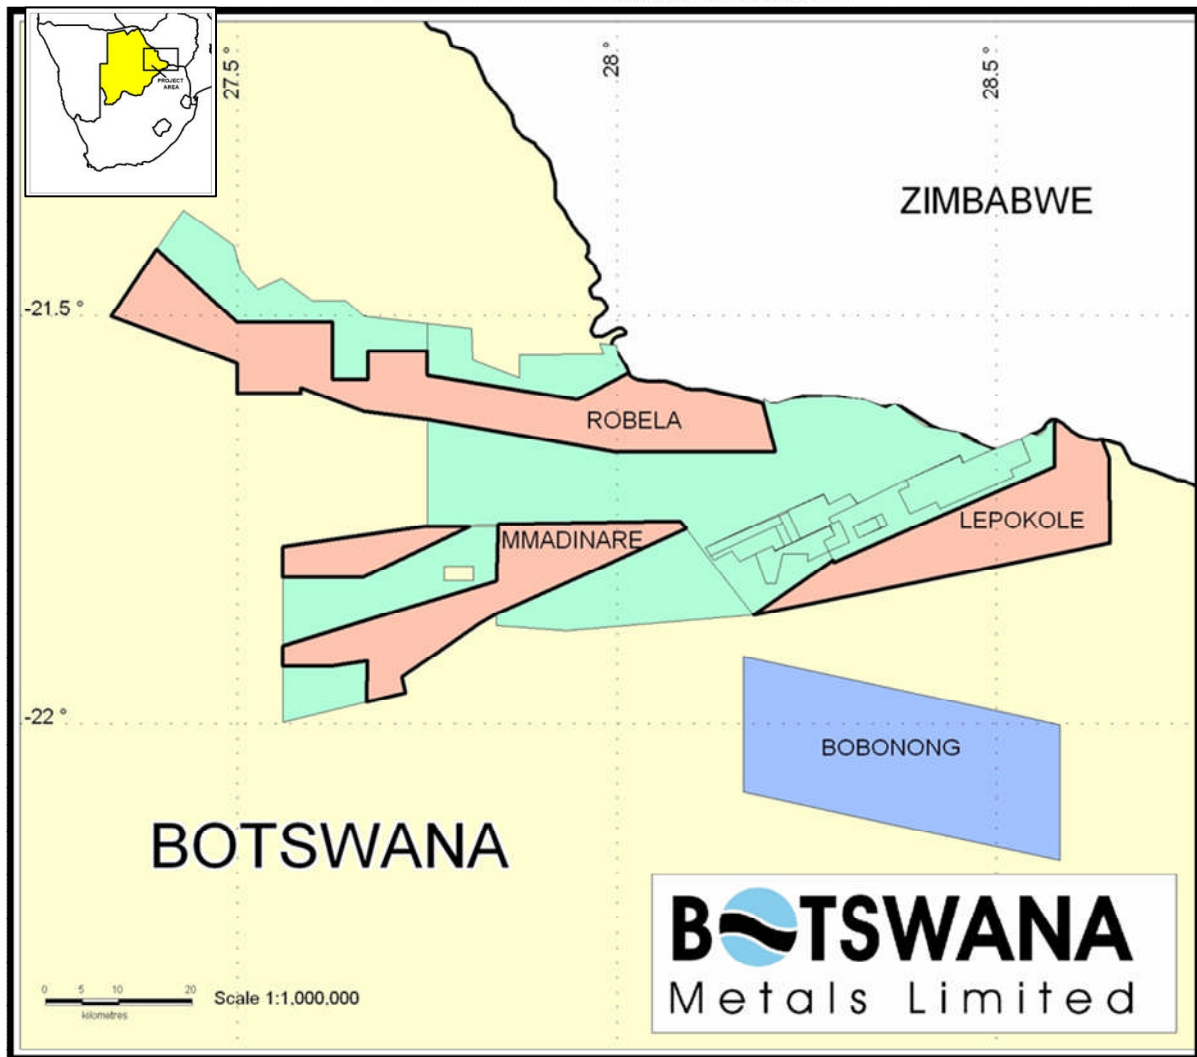

Figure 1 Indicates the Prospecting Licenses recently granted 2-year extensions. The green areas are granted BML Prospecting Licenses, the red areas are new BML PL applications and the blue area is a relinquished diamond prospecting license.

Information in this report that relates to exploration results is based on information compiled by Dr Andrew Tunks who is a member of the Australian Institute of Geoscientists. Dr Tunks is a fulltime employee of the Company. Dr Tunks has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves." Dr Tunks consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.
